

Nationwide Save Your Green Event

Save your dollar today, your planet for tomorrow

Free with the purchase of an Arctic Spa until August 1, 2011
Our Green Package Includes:

FreeHeat® Patented Technology

Like nearly all electrical devices, spa motors convert some of their kinetic energy into heat. While this traditionally has been treated as waste by-product, and was leaked or vented to the great outdoors by other spa designs, FreeHeat® equipped Arctic Spas® capture and re-use this valuable energy. With no insulating barrier between this heat source and the spa water, we simply let energy transfer happen naturally – heat will move from the warmer cabinet to the water, maintaining your desired temperature set point, and reducing expensive heater cycles.

To make things even more efficient, our overlap access door insulation profile removes the last opening for heat loss, making the world's most efficient spas even better. Arctic Spas® with FreeHeat® are so well insulated that we've added our RossExhaust system to actively monitor the cabinet temperature, and exhaust excess heat (only) when needed.

While we believe common sense will tell you the FreeHeat® design will save you money, and our California Energy Commission testing certification backs this up, we continue to lobby for more stringent energy-use legislation. And, as the mercury drops, we would suggest that energy efficiency becomes even important, so choose a spa purpose-built to thrive in challenging conditions.

Eco-Pak with onSpa®*

Arctic Spas raises the bar again with the onSpa® management system. This WiFi and Bluetooth control system allows the user to access virtually all spa functions via the Arctic Spas® App on your smartphone. Turn jets on and off, adjust filtration and purification, stream your favourite playlist, and perhaps most importantly optimize your spa operation to match your electrical provider TOU (time of use) rates, and your own personal preference. Future updates to onSpa® will allow remote monitoring as well, so that you can control your spa, make adjustments and be efficient as possible anywhere you can access the internet. onSpa® makes your spa smarter, more affordable to operate and we're only getting started!

**onSpa® operation requires installation of the Eco-Pak spa pack.

Peak 1 Purification

If sparkling clean, effortless spa water with a minimum of chemicals is your goal, Peak 1 Purification can help you achieve this in a most environmentally conscious manner. Peak 1 combines the reliability of dual FailSafe™ Ozone generators with our Optical Vertical mixing chamber, and our 360 degree V3 Injector to maximize the effectiveness of this amazing residual-free cleaner. Use less chemicals in your spa, or even better - add Peak Purification to our Onzen salt water system to truly add no sanitizer, and have the cutting edge in sparkling clean spa water. Easily maintained spa water with markedly decreased chemical use is good for your family and good for the planet.

Castcore® Mylovac Covers

If your spa cover is the attic of your house – it should be extremely well engineered and well insulated, not an afterthought - after all heat rises doesn't it? Our 5" Castcore® cover, complete with a full length baffle saves you money every day, keeping heat in the water, not the atmosphere. By using higher density foam, and wrapping the foam inserts in Mylovac to effectively stop moisture intrusion, your cover will have a significantly longer lifespan, and ultimately will result in less covers in the landfill. Only a Castcore®-Mylovac cover helps you waste less energy today (and everyday), and pollute less down the road.
